HS&E 29

1.0 Introduction

Plastica Ltd has established a number of objectives for the coming year, details of which can be found in document HSEF 115 Environmental and HS&E Objectives. This document details, amongst other things, the process we have gone through when establishing these objectives, how they will be monitored and how to evaluate results.

2.0 Process to Establish

- 2.1 An objective shall be consistent with our Quality, Health, Safety and Environmental Policies and will relate in whole or in part to Plastica Ltd or a particular department; details of how the objective will be measured will also be documented in HSEF 115 Environmental and HSE Objectives as each measure may be specific rather than generic to the objective.
- 2.2 The objective will take into account all applicable requirements; will be relevant to the conformity of the products and services we produce and will look to enhance customer satisfaction.
- 2.3 Each objective will be monitored by senior management at regular intervals and reviewed at the Management Review.
- 2.4 Information on each objective will be communicated throughout Plastica Ltd together with any available results. A final assessment will be communicated following the relevant Management Review meeting.
- 2.5 Where it is deemed appropriate, we will update an objective or its desired results to ensure that it remains relevant and effective to our requirements.
- 2.6 Each objective will be measurable and detail the following information:
 - What will be done;
 - What resources will be required to achieve our desired result;
 - Who will be responsible for ensuring our desired results are achieved;
 - When the objective has been achieved
 - How we plan to evaluate the results.
- 2.7 Results on how we performed will be discussed at our Management Review meeting.
