

Manually Clear AX Cache

Start by closing any AX sessions, then open Windows explorer. Switch to the view tab and Tick the “Hidden Items” check box. Switch to “Local Disk C” by selecting it from the left-hand list, then open the below folders in Order listed: Users > “Your.Name” > AppData > Local.

Near the bottom of this folder are multiple files named “AX_{RandomNumberString}.auc” or similar. Highlight all the items with the .auc extension and delete them.

Continue opening the folders “Microsoft > Dynamics AX > VSAssemblies”, then select and delete the “AxClientAssemblyCache.auc” file. Close the current window and Re-Open AX to test if the problem persists.
