

INVERTEMP-FL HEAT PUMPS

**SUPPLIED
WITH A COVER**

Features:

- Full Inverter Technology (inverter compressor and variable speed fan)
- Reversible heat pump with automatic active defrost functionality 3 working modes easy for anyone's needs
- Equipped with Pentair ModBus card A range of eight models for pools up to 160m³

Benefits:

- Less power consumption and very quiet
- Ability to heat or cool pools and operate down to -15°C
- Easy to use and control with TFT screen or remotely with a smartphone
- Can be controlled by Pentair automation
- Suitable for all residential pools

INVERTEMP-FL HEAT PUMPS

Summer is the ideal season to enjoy your pool, but why limit it?

The Pentair InverTemp®-FL heat pump automatically heats or cools your pool according to the desired temperature. It adapts to outdoor conditions to ensure optimum bathing comfort while optimising consumption. Equipped with Full Inverter technology, the new Pentair InverTemp®-FL heat pump delivers high and silent performances, thanks to the combination of an inverter compressor and a variable speed fan. They adjust their speed automatically following the operating mode selected by the user via a smartphone or the WiFi TFT screen.

High efficiency and optimised operation costs

The reversible InverTemp-FL heat pump is the most efficient solution for heating or cooling your pool. Its performance coefficient is much higher than market standards. Precise temperature control prevents wasted energy.

Silence by the pool, InverTemp-FL is one of the quietest heat pumps on the market (<40dB (A) @10 m in Ia certified boost mode).

Standalone operation

The heat pump automatically turns on/off to maintain the desired water temperature.

Eco-responsible and clean

The InverTemp-FL heat pump makes use of outside air and does not give off any smells or particles. No fuel storage space required. More environmentally friendly R32 refrigerant.

Remote monitoring

As well as its WiFi TFT screen, you can control this heat pump from your smartphone: very useful for programming the right temperature before your arrival. Compatible with the Speedeo®, Soleo® VS and Intellipool® automation systems, enabling control, diagnosis and alarm overview remotely (Interface modbus RS485).

Simple and intuitive interface

Easy to use and control thanks to the WiFi TFT screen. Compatible with Pentair automation systems (Interface modbus RS485).

Independent defrosting

Its automatic active defrosting function prevents performance-damaging frost and enables it to operate at low temperatures (down to -15°C).

Built to last

Made with quality components that ensure a long service life (titanium exchanger).

Smartphone compatible apps available as standard to operate your heat pump.
