SWIM MASTER™

The SwimMaster™ counter current unit has been specifically chosen to complement our range of Premium wooden pools, however it is not restricted to just wooden pools. The SwimMaster™ counter current unit is suitable for most conventional pool structures. Its sleek, minimalist design means it can be situated perfectly into our wooden pools but we can also supply stainless steel extensions to allow simple installation into concrete pool structures.

Coupled to the Nadorsel 3hp jet pump, this unit is capable of flowing up to 60m³/hr.

Our plumbing kit caters for a close proximity installation on our wooden pools. The kit can also be used for other applications but extra fittings may be required.

The CCU003K is a complete comprehensive kit containing 1 x CCU003 SwimMaster™ CC unit, 1 x PPK007K plumbing kit, 1 x NCP 300 Nadorsel pump and 1 x PINNC17 controller. The CCU004 Concrete kit will be required for concrete/block and liner pools.

NB: Not suitable for salt levels above 250ppm (0.25g/l)

Plumbing kit contents
