- Stainless steel frame with nylon end bosses
- 127mm diameter aluminium tube
- 152mm stainless steel braked castors
- Warranty - 2 Years - Extensions available through Service Agreement

PIGGYBACK REEL SYSTEM

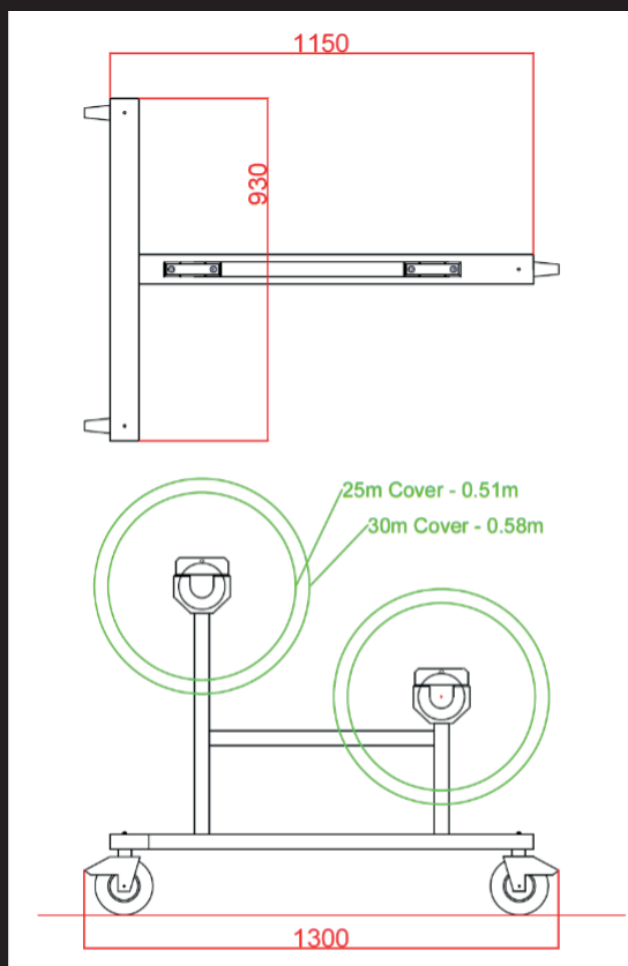

The Plastica Piggyback is a dual post, mobile reel system designed for the larger pool. It is ideal for use on commercial, school and hotel pools where a single reel is impractical due to the pool width.

The Piggyback is suitable for pools up to 13.7m in width and up to 30m in length. It is constructed from ideal materials for

the harsh conditions of the pool environment, using light weight aluminium, stainless steel and non-corrodible nylon end bearings.

The Piggyback system should be moved by two people and can then be operated by just one person to cover or uncover a large pool in record time.

REEL EASY - PIGGYBACK MODEL

TO COVER A POOL

The reel is positioned at one side of the pool end and the first cover is pulled on to the water. The cover is disconnected from the reel by a unique system using quick release buckles. The reel is moved to the second position and the operation repeated. To remove covers the operation is simply reversed.
